

IMMUNE SUPPORT

ImmunotiX 3-6™

POWERFUL IMMUNE ENHANCER

ImmunotiX 3-6™ contains a complex carbohydrate purified from Baker's yeast that primes immune cells to protect the body against various foreign challenges.

ImmunotiX 3-6™ is a patented ingredient that contains beta 1,3/1,6 glucan, a complex carbohydrate. Since the 1960's beta glucan has been known for its ability to:

- Enhance the body's immune response against infections
- Enhance the body's ability to kill tumor cells
- Enhance the body's production of white blood cells diminished by radiation or chemotherapy.

ImmunotiX 3-6™ is the purest food grade beta glucan available. Other sources of beta glucan differ in the way in which their glucose molecules are linked together. The unique structure of the yeast beta glucan makes it the most potent immune enhancer among all other sources.

ImmunotiX 3-6™

POWERFUL IMMUNE ENHANCER

Who Can Benefit From ImmunotiX 3-6™?

Everyone can benefit from an enhanced immune response, especially individuals generally at high risk for infection, surgical patients, individuals with cancer and even those who may be exposed to biological weapons like Anthrax.

Is ImmunotiX 3-6™ Clinically Effective?

More than 60 years of research in more than 800 scientific papers attest to clinical effectiveness. The ingredient in ImmunotiX 3-6™ is the only nutritional component scientifically proven to enhance the immune system. Research has demonstrated its mechanism of action and measured significant changes in immune response.

Are There Any Side Effects?

Study shows that ImmunotiX 3-6™ is generally well-tolerated even in high doses of 15 gm/day for eight weeks. The ingredient is certified GRAS (Generally Recognized As Safe). Unlike some other beta glucan supplements, mannan, a substance known to cause allergic or inflammatory reactions in some individuals has been removed during processing.

Are There Any Contraindications For Use?

There is insufficient reliable information available to recommend ImmunotiX 3-6™ in pregnancy and lactation. Although it is derived from Baker's yeast, the finished ingredient does not contain yeast and therefore, is not expected to cause any allergic response in yeast-sensitive individuals.
